

Hints And Tips

Install Apps from Phone

Requirements

- [Bugjaeger app on phone](#)
- [Have developer mode enabled](#)
- [Have ADB enabled](#)
- Using a wifi without client isolation (starbucks wifi and other public wifi won't work)

Steps

1. Connect your phone and watch to the same wifi, or create a phone wifi Hotspot and connect your watch to it.
2. Settings > Connectivity > Wi-Fi > Connected Wifi, Displays your watch IP Address - Remember it
3. Open bugjaeger on your phone and click the connect button that looks like a power plug.
4. Enter the IP address of your watch.
5. After you're connected you can open the packages tab (arrow up symbol) and press the + button on top. Select an APK from your phone's file system and it will push to install on your watch
